What is it?

- *“GarliCat is for I2P what OnionCat is for Tor.”*
- GarliCat is a **peer-to-peer IPv6 VPN** based on **I2P**.
- It uses specific method of addressing which correlates to the underlying network.
- I2P is an **anonymization network** comparable to Tor.

GarliCat Primary Goal

- (Tor/I2P) Network internal services create **both-sided** anonymity.
 - GarliCat creates the **network layer**.
- We could **build an anonymous Internet** within the Internet.
